

SPF Polychaete PRO

FEED FOR SHRIMP

SPF Polychaete PRO is a high quality product that helps to provide a predictable supply chain.

SPF Polychaete PRO is cultured marine polychaetes (*Nereis virens*) to be used as a broodstock shrimp feed.

Farmed in a North European climate it is completely free of tropical shrimp pathogens. Biosecurity measures are high in all aspects of the production, including testing of feed consumed by the polychaetes. SPF Polychaete PRO has a good fatty acid profile to secure a good start for Nauplii, providing high numbers of Nauplii/female and low deformity and a high fertilisation rate. SPF Polychaete PRO is disinfected at a very high level and should not be washed prior to use.

Analysis

NUTRIENT	VALUE	NUTRIENT	VALUE
Moisture (%)	85	DHA (mg/g lipid)	24.2
Protein (% DW)	63	ARA (mg/g lipid)	5.6
Lipids (% DW)	14	Cholesterol (% DW)	1.2
EPA (mg/g lipid)	72.3		

Ingredients

100% marine polychaete (*Nereis virens*), cultured, freshly frozen.

Storage condition

Store frozen. (best at -20°C)

Instruction for use

SPF polychaetes must be applied to the shrimp tank (whole and while frozen). To preserve their maximum nutritional qualities, polychaetes should not be defrosted nor cut before their use.

Feed 3-4% of the shrimp breedersbody-weight per day at once.

Packaging

Bags of 1 kg.
Transparent, vacuumed, polyethylene bag.

Shelf-life

2 years
